

HOME COMPOSTING BIN

About TALLBOY® System

Composting at home is a hazy subject, with a wide range of options emerging in a short period of time. There are a few things to consider about when choosing a compost bin for your home. Decomposing food and garden waste into good quality compost takes at least 2 to 3 months.

TALLBOY® BioBin is made to be used like any other bin; just keep dumping till it's full. When the bin is full to the brim, start gathering highly nutritious, fully digested, deep brown earthy-scented compost from the bottom.

01
OPTION

GREENS:BROWNS

If you enjoy composting, the TBB 400 TALLBOY® BioBin allows you to do it properly by combining greens and browns in the precise proportions (G:B, 1:2). It's big enough for both of them.

02
OPTION

BIO BIN

The lower layers are composted when the bin fills up. The 90 percent open sides of the bin provide for optimal aeration and aerobic digestion of the contents. Composting without the mess and odour. Proprietary Design.

03
OPTION

RICH HARVEST

The magical moments are when you pick up the compost in your hands and smell, food waste converting to rich brown, highly nutritious, fully digested earthy smell compost. Rejuvenates the soil.

No manual intervention,
no lifting shifting,
Hassle free & hygienic
composting.

Movable, comes with
heavy duty castor
wheels, easy to
shift. Comes in
attractive colours.

No heating, natural
digestion, the output
compost is rich in
nutrients, plants
love it.
